Daily Scholar Papers Report — 2026-06-10

[Download PDF](#)

Window covered: 2026-06-09 → 2026-06-10 (Google Scholar alerts + user-curated self-emails, last 24 h)

Executive Summary

Quiet window — zero net-new candidates. The only Gmail matches in the last 24 h are the three Scholar-alert threads delivered at 03:17 UTC yesterday, which were already triaged, deep-read, and reported in the [2026-06-09 digest](#). No user-curated self-emails landed; no author-exclusion-list hits. The next Scholar batch is expected at ~03:17 UTC on 2026-06-10, after which fresh content can flow.

Outstanding: 0 · **Keep:** 0 · **Borderline High-Priority:** 0

Pointer to yesterday’s coverage

For continuity, the four papers surfaced by yesterday’s window remain the most recent items in scope:

#	Title	Authors	Venue	Link
—	Towards the Readability of LLM-Generated Codes through Multitask Representation Engineering	H. Gao, L. He, Y. Pan, S. Yu, Y. Zeng, S. Qin, W. Sun	arXiv 2606.06214	arXiv
—	FUZZItizer: Hardware Sanitizer-Assisted Fuzzing for Automated SoC Vulnerability Detection	R. Kande, M. Rostami, C. Chen, H. Khattri, J.M. Fung, A.-R. Sadeghi, J. Rajendran	AsiaCCS 2026	DOI
—	RESTing-LLAMA: Large Language Model based REST API Fuzzing	V. Gadey, C. Sendner, K. Zimmermann, A. Dmitrienko	AsiaCCS 2026	DOI
—	SoK: Navigating the Privacy-UX Trade-offs in Extended	S. Wang, M.A.P. Chamikara, M.	Proc. ACM 2026	DOI

#	Title	Authors	Venue	Link
	Reality (XR) — A Socio-Technical Taxonomy and Research Roadmap	Baruwal Chhetri, Z. Xing, et al.		

Full deep-read and synthesis are in the [2026-06-09 report](#).

Cross-Paper Synthesis

No new papers — synthesis carries forward from the [2026-06-09 report](#). Two threads remain on the radar: hardware-software fuzzing convergence (sanitizer-style detection migrating into RTL/SoC verification), and property-level decoding-time control with bounded loss (orthogonality-constrained joint PCA as a multi-property steering primitive).

Writing & Rationale Insights

A zero-new-papers day is itself a useful signal. Two reusable handling moves: (i) refer readers back to the most recent substantive day rather than re-render identical content, and (ii) keep the carry-over report in the same `docs/reports/YYYY-MM-DD/` shape so the site index, PDF link, and feedback-button injection pass uniformly. The site index now records continuity rather than an absence.
