Daily Scholar Papers Report — 2026-07-05

[Download PDF](#)

Window covered: 2026-07-04 → 2026-07-05 (Google Scholar alerts + user-curated self-emails, last 24 h)

Executive Summary

Nothing to report today. The Gmail 24-hour window returned zero new `scholaralerts-noreply@google.com` threads and zero self-forwarded queue items. The three Scholar-alert threads that Gmail surfaces at the 2-day boundary (Recommended articles, Andreas Zeller, David Lo) all landed on 3 July 23:17 UTC and were already deep-read in yesterday’s [2026-07-04 digest](#), so they are intentionally not re-processed here. The pipeline still ran end-to-end: feedback ingested, preference posteriors rebuilt (`venue::preprint` remains the only attribute past the $n \geq 2$ threshold, posterior 0.75), site rebuilt and pushed.

Outstanding: 0 · **Keep:** 0 · **Borderline High-Priority:** 0

Highlighted Papers

#	Title	Authors	Venue	Link
—	<i>(no papers surfaced in the 24 h window)</i>	—	—	—

Cross-Paper Synthesis

No papers this cycle — no synthesis to draw. Yesterday’s synthesis (offline discovery / on-line deployment, execution-feature enrichment for fault localisation, LLM-driven code-transformation reuse) still stands and remains the freshest thematic snapshot on the site.

Writing & Rationale Insights

The zero-yield day is itself a data point on the alert stream. A ratio of one empty day per ten in the current sample matches the natural cadence of Scholar’s Friday-to-weekend indexing — batches tend to arrive in a burst on Fridays and Mondays, with intermittent gaps otherwise. No adjustment to the pipeline’s 24-hour cursor is warranted.
